### **Sorting Bot**

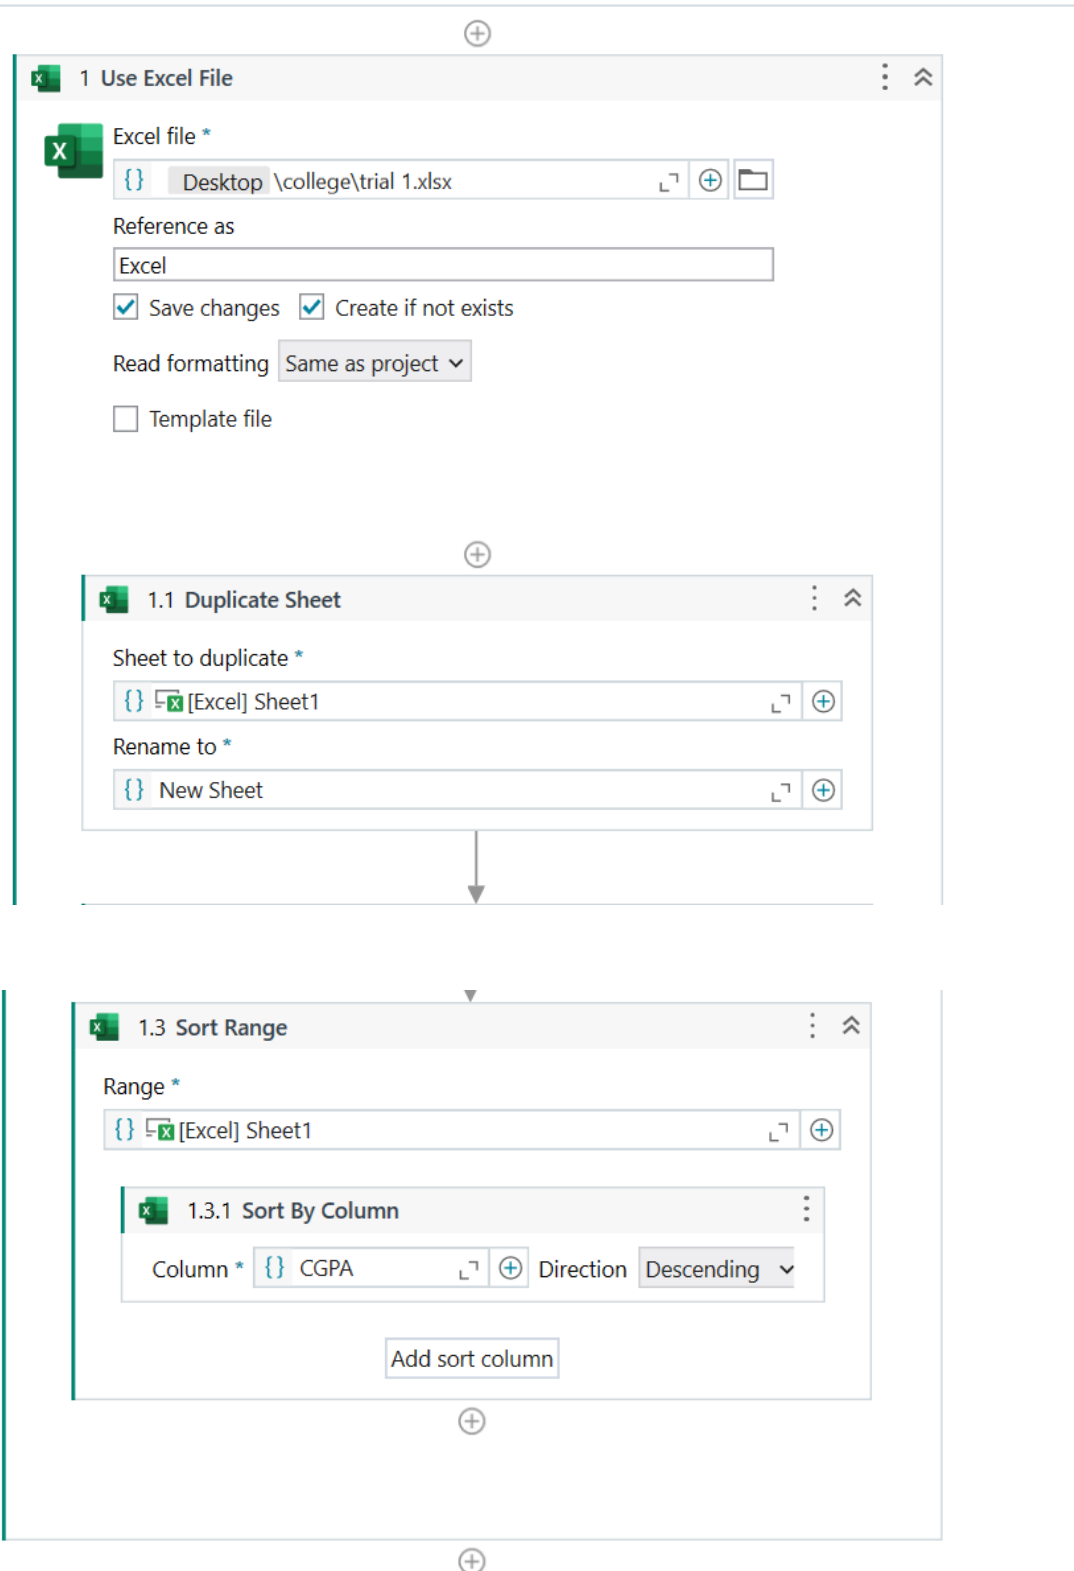

#### **Aim:**

Create a document sorting bot to atomize the process of extracting the data from an excel file, according to the specific condition and store them in another excel file.

#### **Algorithm:**

1. Open UiPath and take a new Blank task and name it.
2. Drag and drop the 'Use Excel File' operation in the centre.
3. Provide the excel file to be worked on and save changes.
4. Then add the 'Duplicate Sheet' inside the 1st box.
5. Name the duplicate sheet created.
6. Then insert the 'Filter' box after duplicate sheets and filter the required column.
7. Sort the duplicate sheet according to your wish. Take any column and sort.
8. Finally Run the task and wait for the result.
9. After Successful run, open the excel to see the new sheet after being filtered and sorted.
